* Professionals use Photoshop in a variety of industries, including magazines, newspapers, books, and so on. * Most professional designers and artists use Photoshop and similar photo editing software to edit and improve their photos. * Photoshop is available for every major computer operating system. Users run the program via a graphics card or an application program that runs on a computer system. * When working with a photo, Photoshop enables you to make changes by adding new layers and editing different parts of an image. If you want to crop out an object, for instance, you can do it without the ability to move the area you want to crop to a new layer. This would be difficult to do without a layer-based editing system. * Unlike other applications, Photoshop's layered editing system enables you to see a preview on the computer screen of what you're doing. This kind of preview lets you visually see how your work is coming along, and it lets you experiment with different transformations as you edit and refine your photo. What makes Photoshop so widely used is that it has all the tools and functions that any professional designer or photographer needs. You can be working professionally in a variety of types of media and in a variety of industries, including books and newspapers. Although professionals and those who are interested in learning Photoshop will be familiar with the program, the new user may need some instruction in using the program before it is quite as convenient for him or her as it is for the seasoned professional.

In this article, we will show you how to turn a photo of a dog into a vector dog (circle) and a portrait of a person into a vector person with rounded corners. Vector graphic images can be exported to other vector graphic software, but the quality will not be the same as it is in a vector graphic editor. In addition, Photoshop Elements can't export vectors into other formats. The process used to create a vector graphic is almost the same as creating a bitmap, except vector graphics are infinitely scalable and can be as small or as large as you want them to be. All shapes and text remain the same size and do not scale. So, you don't have to worry about changing the size of an image when you export it to another format. All web pages and websites that load images are built up using lots of images. These images are all made in one way or another: Select a photo and use the filter to turn it into a black and white photo. Select a photo and use the filter to turn it into a cartoon-looking photo. Select a photo and use the filter to turn it into a photo that looks like text. Select a photo and use the filter to make it a display photograph. Select a photo and use the filter to turn it into a photo of a dog. These are just a few of the ways that photographers are creating graphics that can be used and reused over and over again. Learning how to transform a photo into a vector graphic is a great way to make graphics that can be adjusted to suit your needs. So, let's learn how to transform a photo of a dog into a vector dog. Step 1. Import a Photo of a Dog Start by opening Photoshop Elements. If you already have the program downloaded, click File > Open and browse to the folder where you have saved it on your hard drive. After that, open the photo you want to use. The photo of a dog you want to use is located in the following folder: Windows Users C:\Users\%USERNAME%\Pictures Mac OS X Users /Users/%USERNAME%/Pictures Linux Users /home/%USERNAME%/Pictures Please note that the file of a dog should be a jpeg file. If you want to use a psd file, a681f4349e

Silicon Valley Best Time to Visit S.F. Highlighted by the weather, the Freedom Trail, and the vibrant tech hub around the city's Civic Center, San Francisco overflows with people year-round. Memorial Day through Labor Day is the absolute busiest time to visit. Though weather is mild almost year-round, other factors contribute to the highest number of visitors in summer. A daytime temperature of 79 degrees in spring and fall and a nighttime temperature of 50 degrees in winter and summer offer a year-round comfortable experience. This week I'll be taking a look at all the recent Linux games announced in the last week, or so. First up is classic puzzler FlightGear, a free game funded by volunteers that has been developed for Linux for over a decade now. FlightGear is perhaps the most well-known of all the Linux games. It's a flight simulator, and one of the first releases of the game was the Hyland package for Debian which still exists, which came a few years after the original source port was created. Both of those games have seen a steady stream of updates since then, and FlightGear was the top free game released on Linux between 2010 and 2012 according to Distrowatch. The History of FlightGear FlightGear came out in 1999, and is based on the real-life FAA flight simulation computer code called Cockpit 3000. It's an open source project, meaning that while it's developed by volunteers, the code that's released is under a free software license. FlightGear was created by a Swedish team called Adam, and was originally hosted on SourceForge, but in March 2009, the team moved to and then to github. The team has been active on SourceForge since 2001, but it's the move to GitHub that means the team's very active in adding new features and fixing bugs. The Future of FlightGear The project has a very active Development Team (DT) that was started in 2007. The team's members fall into two categories: The core developers. Contributors (sometimes called "modders"). The core developers take on the labour-intensive tasks, such as porting new content, or balancing the game's content, while contributors assist the core developers by working on documentation and translation, making sure that the game is

Steve Jobs Biography: Another History of the Cult of Apple - jedwhite ===== wccrawford The author is misleading on quite a few things. He says they get the bulk of their revenue from iPhone and Mac sales. This is true, but it's a misnomer, as 'phone sales' include smart phones, feature phones, gaming consoles, media streamers, etc. They also get a good chunk of revenue from iPads. Even AppleTV. And I'm sure it doesn't hurt that the ipods, batteries, and miniaturized parts of the computers are all from them. He also keeps using the word 'cult' to talk about Apple, and says that the company is 'cult-like' in it's customer-focus. I think this is a subtle bit of the 'cult of Apple' he's talking about, but one which has „much_ more to do with the company ignoring competitors for too long. CLANCY OVERELL | Editor | CONTACT As the World Health Organisation continues to deny, this weekend, that there is a virus in our environment that can still be transmitted by touch, it has emerged that it has been watching the weather - and its progress, via a handful of Facebook groups online. At first glance, it looks like the West has had a better few days than the East: But in the past 24 hours, the Australian Medical Association has reported several cases of rashes among some groups of people, who didn't have obvious contact with a known case. As far back as Dec. 27, the WA health authority put out a press release, pleading with people to take measures to contain the coronavirus: “We want to remind everyone, that if you're not experiencing symptoms and don't have a COVID-19 diagnosis, you don't need to go to a GP. This is the time to stay inside and stay home if you're unwell.” This, despite the Bali bombings and other terrorist attacks having already occurred, and the possibility of the coronavirus originating from them. At the time of printing, there have been 57
