Epidemiological and experimental data suggest that gliadin, the prolamin from wheat and related cereals, could play a role in the development of gluten-related disorders (autism, type 1 diabetes mellitus, celiac disease). The molecular mechanism(s) involved in this process is not well understood. Salicylic acid (SA) has been implicated in celiac disease pathogenesis, as well as being a gliadin antagonist. The effect of SA in Giardia intestinalis trophozoites in vitro was investigated. Results indicated that SA interferes with the growth and viability of G. intestinalis trophozoites. Furthermore, the effect of SA on cellular processes, such as cell cycle progression and mitosis, was investigated. The results suggested that SA perturbs G2/M transition of trophozoites. However, the mechanism by which SA interferes with this cellular event remains to be elucidated. Moreover, SA induced the activation
