Note You'll need to close the current open file before you can open a new one. However, if you open and save a file, it's called a New Document. You can store these as New, or other descriptive filenames in your Preferences menu. 12. 12. Click the Raster Special Effects (top left) menu and select Background, or press E. 13. 13. Click the Background item and select Blank. A new,

When using Photoshop Elements you will also have access to Adobe Photoshop. As Adobe Photoshop (and Photoshop Elements) is free, you will not be able to run elements in a standalone mode. You may or may not be familiar with Photoshop. If you have never used

---

Photoshop before, you will be surprised at how much you can do. If you have used Photoshop before then you will know the difference in the interface and how much more easy it is to learn. You will quickly understand the difference in interface. It is much more user-friendly. Elements uses the canvas to make you work. It is much easier to understand. As Photoshop will only run within Adobe Acrobat, you will need to create a new account, and then sign up for a new Adobe Acrobat account. Your account will automatically be associated with Photoshop as it is the same program. Make sure you check the box that says "Manage Acrobat and Acrobat Professional and Online Services Through Adobe Software Account." After you have done this, any new files you create will be attributed to your Photoshop account and you will be able to sign in to use Photoshop Elements and Photoshop simultaneously. To create a new file in

Photoshop Elements just click on New. You can then use the keyboard shortcut of Ctrl + N to make a new image. Or click on the file name icon and choose Open. In Photoshop Elements you can make many different changes to images. The most common functions include: - Cropping the image. - Selecting the image - Blur and shadow adjustments - Cutting out parts of an image - Coloring and adding patterns - Adding or removing filters - Resizing, rotating, flipping and transforming - Transforming and sculpting - Changing the color, brightness and contrast of an image - Adding multiple layers - Bleaching, blocking and removing objects Photoshop Elements is an ideal way to edit digital images because you can select certain areas to remove or edit easily. Elements has a selection tool, which is much easier to use than using Ctrl + A. It is also very useful when you are making the small adjustments that are necessary when changing

something which you might not have thought of as being for women, then you can be reassured that there is an existing database for females and that the remedy is readily available. If you are looking for a different

company, though, please continue down to the bottom of the page. The vast majority of these companies are registered with the ICO and have extensive disclosures. Here are the details for Moonpig. Moonpig Claims Moonpig are a web hosting company who are fast becoming the new 'warbux' of the marketing world. Although not expressly for females, they do have a whole range of services that are designed specifically for women. Of course, it is possible to try and scrape these pages for data, but it is quite likely that they will not be forthcoming with a great deal of data. Moonpig believe that the fact they are a female-centric company is the reason that they have come to be seen as 'the darling of the business world.' Whilst this is a rare claim to make for a web hosting company in 2016, the precedent set by the web hosting industry is strong enough that it makes this claim seem credible. Service To start with, Moonpig offer their standard Shared

---

Hosting packages at a relatively low cost. It is possible to buy a 3 month package for the price of £5 per month. Their standard shared hosting plans are certainly acceptable, and are capable of running the majority of websites without issue. What they need to be careful about is running large numbers of websites with only the shared hosting. In the past, some web hosts have not been very transparent about this, but Moonpig are different. Their hosting plan shows a number of 'load' numbers, and these demonstrate that the company are happy to run websites with large numbers of traffic. With standard shared hosting, you will notice that each of your websites will only be allocated a certain amount of bandwidth. This is to prevent one company from taking advantage of a host by building up a large amount of traffic and then leaving it all to go to the few websites which use a lot of bandwidth. Moonpig are much

---

more transparent about this than some of their competitors. When you purchase a package of this nature, you have the option to define a number of 'cores,' which will, as the name implies, give each website dedicated resources. This is a nice touch
