Adobe Photoshop is a popular graphics program that is used for both professional and personal applications. You can use this program to design websites and to edit pictures. The company has also made some other major changes to Photoshop to cut down on the number of potentially confusing adjustments you have to make to the color of an image (some colors are impossible to shift in a single step). And the Photoshop interface is also streamlined. It's easier than ever to tune individual sliders for subtle colors, and the ability to quickly access or create color profiles allow for greater flexibility in color rendering. You can also change the color you see in the Interpolations palette. You can also now type an RGB or CMYK value or choose between two color models. But the best part of the update is the fact that Photoshop now comes stock with new, less intense, non-destructive DIGITAL SCRIPT feature. This is a massive new native Photoshop feature that allows the user to apply any kind of effect or adjustment without the need to use the Bridge. **ADOBE PS:** smart tool - the "smart tool", which is one of the most useful new features that allows you to sharpen and blur images to different degrees while adjusting other image characteristics in real time. With all the new features and components that have been added to the program, it became increasingly difficult to remember where everything was and what functions were accessible in Photoshop. A single window (Photoshop document) now contains all of your editing materials, ready for you to work on. As you do this work, you can either use the timeline panel to see the development of your project or look at the layers panel, which highlights whichever layers are currently open. You can use the Paths panel to make sure you create the perfect path for every item in your image. With the Curves adjustments, you can alter the tone and overall color of any single color, gradient, or its shadows to create a totally personalized look. This panel also includes a Video Strip feature that allows you to strip a background layer from all the video and so you can use the layer's mask to cut out any objects present in the video. Enabling users to collaborate and track progress on projects with nearly unmatched power is the best new feature for Photoshop. Share for Review is a new collaboration feature that enables anyone to review, comment on and view changes protected by digital rights management (DRM) without leaving Photoshop. With an intuitive interface that allows for viewing of input, suggested changes, and comments without leaving Photoshop, users can easily collaborate and discuss changes with anyone, including creative individuals and non-designers. Anyone can make or provide changes to an image as easily on a mobile device or as easily a desktop computer. Share for Review is available as a beta right now in Photoshop CC, and is expected to be available in all Creative Cloud versions of Photoshop in the coming months.
