I still love the interface and feel that it's better than its predecessor. What I don't like is that there are times when the Crop tool doesn't do its job properly. This is because the files I use for morphtargeting often have simple shapes. By this I mean simply that the cartoonish cutout of a camera lens has a square, rectangle, or triangle shape. Because I shoot a lot with a wide-angle lens, its shapes often look distorted. I find that Lightroom 4 centered the main image and crop window to the top-right and bottom-right of the rectangle or square (depending on the shape), but Lightroom 5 crops to the upper-right corner of the rectangle and crops a notch in the image left and/or down from the center. It is unclear why Lightroom 5 doesn't honor the typical Crop tool behavior. It is somewhat of a moot point, however, as the Crop tool in Lightroom 5 has a nifty Hold feature that shifts the crop window or crop box even when it's off the image's edge. The Hold function gradually appears in the upper-right side of the crop window as you move it around. It shifts toward the right corner of the crop window and then stops there. Any part of the image that is bigger than the crop window is not affected by the crop image area. To use it is easy enough: simply click and hold the center cursor in the crop window. Personally, I don't like the new Perspective view. It is more like the Crop tool than the older Grid view in that you can basically slice up the layers and groups based on location. In the Grid view, on the other hand, it's more like the Crop tool in that you can simply resize and move the crop box around the image boundary. When the crop area is in location like you might want, you can optionally group the layers into a new layer group to make it easily accessible in the Layers panel. You can also manipulate them together as a group without affecting the other layers. Grouping: GUIs behave more like gadgets than applications these days. Depending on your preferences, you might love what you see in Lightroom 5. I don't care for it.

Adobe's current suite of photo-management tools includes versions of Lightroom (formerly named Adobe Lightroom Classic), Lightroom for iOS, and Lightroom Classic Mobile, which provides mobile editing capability across Apple devices. Elements includes the new Auto Enhance feature, which, in a similar way as with most of the tools in the program, does one thing - sharpens your images. Auto Enhance scans the image for different areas of your photo and looks for areas that are too slightly blurred to be good enough. The tool then selects the sharpest area for the photo and then corrects the noise and blur from the edges of the image to make it crisper and more sharp. A full list of new features and improvements in Photoshop, including:

- **Share for Review** The new Update to Review feature enables collaborative editing on teams, partners or individuals while avoiding the delays associated with e-mail document sharing. Users can update and share an edited file or document through the app, or directly from the cloud. They can also continue to track each other's progress in real time, view the updates in real time without the need of a shared link, and revert back to prior versions.

At MAX, Adobe also introduced Ambient Lighting Effect, a technology that allows users to fine-tune the appearance of a lit scene simply by holding their iPhone or Android phone up to the image. With Ambient Lighting Effect, users can instantly see what Light and Dark areas are in an image, and adjust these areas to change the look and feel of an image. New Camera Match Fix feature enables users to fix mistakes made when taking a shot of a scene and automatically correct the colors of the scene before the image is saved.

In addition to the new features, Photoshop CC 2019 also adds an entirely new camera workflow. The new Camera Raw panel is designed to let creative professionals work efficiently in every stage of the creative process, from shooting to post-processing with full-featured preview and editing tools. The new workflow is seamless, and users can easily toggle between viewing a normal photo and its Camera Raw editing settings. New tools enhance the user experience throughout the camera workflow. Adobe has enhanced the Auto Tone panel for photos, including support for full HD video and the Color Curves panel for the red, green, and blue channels. Some of the most notable new features include:

- Introduction of the new Photoshop camera RAW format
 - [Adobe says "Photoshop CC 2019.2 (27.0.1) > Create or open any image using the new Camera Raw (.cr2) file format, automatically open the image in Camera Raw, or import RAW files from up to 35 different applications.
