The launch of Lightroom 5 at the beginning of the year may have given the impression that popular photo editing software company Adobe was about to ruin the iOS workflow. Not exactly! The company successfully managed to release both Photoshop 2023 and Lightroom 5 without hindering iOS users. Users can continue to work in other apps on their iPads as they would in their desktop computers, and they can integrate Lightroom and Photoshop seamlessly in the process. And thanks to one very important change in the update—the integration of Adobe Camera Raw, Lightroom had become less of a Photoshop competitor and more of a lightweight alternative. So why did the company deal with it so well? Adobe Photoshop | Lightroom 5 Though Lightroom 5 offers some very welcome improvements in the desktop program, iPad photographers may be disappointed to know most of their editing brushes are still not yet compatible. However, there is good news for those who use other photo editing software on iOS devices. The update also brings new and improved collaboration features to Lightroom, and also improves the way Lightroom can import image files from other software apps. Apple iOS users can use WiFi-Direct to link their devices to their desktop computer's hard drive. For example, if you want to sync a special pic to the Lightroom app, instead of connecting to a Mac, for example, you could wirelessly upload the picture using a special feature for iOS called Home Sharing.
